

FABIÁN BRENES ORTEGA

Manufacturing Technician | Electromechanical / Electronic Engineering Support

Cartago, Costa Rica · +506 6007-5688 · fabibrenesortega@gmail.com · linkedin.com/in/fabianbrenes

PROFESSIONAL PROFILE

Técnico Medio en Electrónica Industrial with 6 years of experience supporting production lines in regulated medical device and semiconductor manufacturing environments (Intel, Coloplast, Qorvo). Hands-on experience working under ISO 13485, in cleanroom conditions and regulated medical environments. Background in equipment set-up, preventive/corrective maintenance and troubleshooting to prevent line downs, with proven results: 15% reduction in equipment downtime and improved test yield through calibration and root-cause problem solving. Accustomed to working under strict quality and safety standards in regulated manufacturing, with documentation discipline and attention to detail. Currently pursuing a degree in Electromechanical Engineering. Intermediate English (B2, studied at Centro Cultural Costarricense Norteamericano), written and verbal.

PROFESSIONAL EXPERIENCE

Manufacturing Technician — Qorvo Inc. | Mar 2022 – Dec 2025

Zona Franca Metropolitana, Heredia · Semiconductor manufacturing. Departure due to Qorvo's Costa Rica plant closure and relocation to Asia.

- Preventive and corrective maintenance of SMT line equipment: pick and place, reflow ovens, fixture-based electrical testers and vision systems — set-up and support to prevent production line downs.
- Diagnosis and repair of failures in electrical, pneumatic, vacuum and compressed air systems, communicating and coordinating with cross-functional areas to keep production running without interruption.
- Monitoring and optimization of electrical test equipment performance through calibration and technical adjustments, aligned with quality standards.
- Root-cause problem solving and continuous improvement projects to reduce downtime and non-conforming product.
- Spare parts management and requisition through SAP.
- Documentation and records support for production processes.
- Result: 15% reduction in production equipment downtime.
- Result: improved electrical test yield through fixture calibration and adjustment, reducing mechanical and test-related rejects.

Technical Operator — Coloplast | Aug 2021 – Jan 2022

Regulated medical device manufacturing.

- Operation and technical support of industrial machinery for medical device manufacturing in a cleanroom environment.
- Diagnosis, repair and preventive maintenance of electrical and pneumatic equipment under strict quality and safety standards for the medical sector, including ISO 13485.
- Selected for technical training in Hungary as part of a technology transfer process for medical manufacturing equipment.

Lab Technician — Infotree Global Solutions (assigned to Intel) | May 2020 – Aug 2021

Intel technical area, Heredia · Semiconductor manufacturing.

- Technical support and operation of laboratory equipment on a semiconductor manufacturing line.
- Failure diagnosis and equipment maintenance under Intel quality standards.
- Rotating-shift work within a multi-level technical team.

AUTOMATION & DATA ANALYSIS

Self-developed automation, monitoring and data analysis tools, AI-assisted:

- 24/7 continuous-operation monitoring and data-logging system with alerts, connection-failure detection and automatic recovery.
- Statistical analysis of operational data and result validation using independent test sets — analytical/critical-thinking approach applied to process data.

EDUCATION

- Electromechanical Engineering — Universidad Fidélitas · In progress (35%)
- Técnico Medio en Electrónica Industrial (Industrial Electronics Technical Diploma) — COVAO · 2017 – 2019

TECHNICAL SKILLS

- SMT lines: pick and place · reflow ovens · fixture-based electrical testers · vision systems
- Maintenance: preventive · corrective · failure diagnosis · calibration · equipment set-up
- Systems: electrical · pneumatic · vacuum · compressed air
- Software: SAP (spare parts & requisitions) · Microsoft Office
- Quality & process: ISO 13485 · cleanroom environment · regulated medical device manufacturing · documentation and records · root-cause problem solving · continuous improvement · yield optimization · downtime reduction
- Automation: data analysis · AI-assisted tool development

LANGUAGES

Spanish: native · English: B2 (upper-intermediate), studied at Centro Cultural Costarricense Norteamericano, with work experience and technical training in an international environment.
